

Technical Advisory Group (TAG) – as part of the Jackson/Teton County Plan update process, a Technical Advisory Committee is being formed to work closely with the planning team (staff and consultants) throughout the duration of the project. The role of the TAG will be to provide technical information and ensure coordination between Town and County departments and other county, state, and federal agencies and service providers. In order to ensure efficiency during the planning process, we are recommending that TAG meetings would be held periodically on an as-needed basis when the consultant team is in Jackson for other meetings. At other times, materials may be forwarded to committee members for their review and comment on an individual basis, without the need for a committee meeting.
